

The new PFERD Hoof Plane:
Extremely effective and cost-efficient

NEW

- Fast results due to outstanding cutting performance.
- Creates uniformly smooth hoof surfaces.
- Minimizes physical effort and back strain during use.

The new PFERD Hoof Plane:

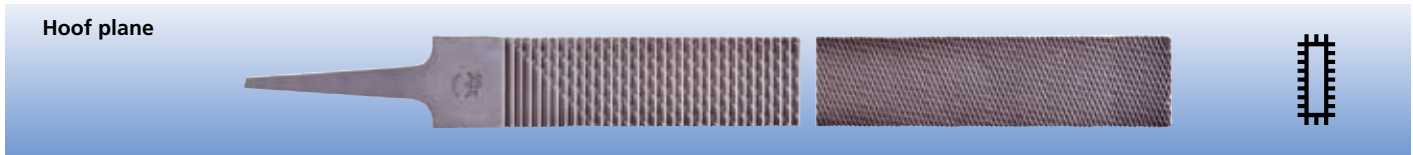

Extremely effective and cost-efficient

Hoof rasps have been manufactured since the late 18th century and were among the first PFERD tools.

With this new hoof plane, PFERD presents an innovative, extremely effective and cost-efficient product for smoothing and shaping horse hooves.

Its outstanding cutting performance ensures fast results while minimizing physical effort and back strain during use. At the same time, rapid stock removal and a high-grade surface finish are guaranteed.

Unlike conventional products, this hoof plane does not have rasp cut or cross cut faces but possesses milled teeth on both sides (one fine, one coarse side).

even hoof nails can be dressed with this tool after shoeing – neither the nails nor the steel of the horseshoe will cause its teeth to become blunt.

Recommendation for use:
The PFERD hoof plane can be fitted with standard file handles of the appropriate size.

It can be used for planing the hoof surface, trimming the hoof wall and filing the toe. Thanks to the high material quality employed,

Supplied as a rectangular file with tang, teeth on all four sides.

Length (Inches)	Cross-section (Inches)	Cut	EDP Number		
14	1-3/4 x 1/4	milled	15040	5	5.75

Long hoof chips obtained with coarse side cut.

Trimming and cleaning hooves.

Filing hoof nails after shoeing.

Dressing the hoof wall and toe.

Technical Changes Reserved.
